Many early years students and practitioners can struggle with how to observe children, knowing what makes good observations, as well as how to use them and why they matter so much. This is a very practical 'how to' book on observing young children and preparing a child case study, with helpful guidance on how to go about this, including where and how to begin and proceed; appropriate techniques and related processes as well as possible pitfalls. In addition the book includes examples of good observations which show how your observation can be evaluated, analysed and used. The book covers the whole process of embarking on the study or observation of a child (or children) including sensitive areas or areas to avoid. It begins with choosing a child to study; the ethics of the study; ways of gathering data and tools to use; observations that are useful; examples of short child case studies and longer child case studies; how to select material to include; and, analysing or interpreting the material.

Social service agencies are facing the same expectations in quality management and outcomes as private companies, compelling staff members and researchers to provide and interpret valid and useful research to stakeholders at all levels in the field. Child welfare agencies are particularly scrutinized. In this textbook, two highly experienced researchers offer the best techniques for conducting sound research in the field. Covering not only the methodological challenges but also the real-life constraints of research in child welfare settings, Amy J. L. Baker and Benjamin J. Charvat present a volume that can be used both for general research methods and as a practical guide for conducting research in the field of child welfare. Baker and Charvat devote an entire chapter to ethical issues involved in researching children and their families and the limits of confidentiality within this population. They weave a discussion of ethics throughout the book, and each chapter begins with a scenario that presents a question or problem to work through, enabling readers to fully grasp the methods in the context of a specific setting or area of concern. Special sections concentrate on the value of continuous quality-improvement activities, which enable the collection and analysis of data outside of the strictures of publishable research, and the implementation of program evaluations, which can be helpful in obtaining further research and

programmatic funding.

The importance of the early years in young children's lives and the rigid inequality in literacy achievement are a stimulating backdrop to current research in young children's language and literacy development. This book reports new data and empirical analyses that advance the theory of language and literacy, with researchers using different methodologies in conducting their study, with both a sound empirical underpinning and a captivating analytical rationalization of the results. The contributors to this volume used several methodological methods (e.g. quantitative, qualitative) to describe the complete concept of the study; the achievement of the study; and the study in an appropriate manner based on the study's methodology. The contributions to this volume cover a wide range of topics, including dual language learners; Latino immigrant children; children who have hearing disabilities; parents' and teachers' beliefs about language development; early literacy skills of toddlers and preschool children; interventions; multimodalities in early literacies; writing; and family literacy. The studies were conducted in various early childhood settings such as child care, nursery school, Head Start, kindergarten, and primary grades, and the subjects in the studies represent the pluralism of the globe - a pluralism of language, backgrounds, ethnicity, abilities, and disabilities. This book was originally published as a special issue of Early Child Development and Care.
