A Closed-loop Control System, also known as a feedback control system is a control system which uses the concept of an open loop system as its forward path but has one or more feedback loops (hence its name) or paths between its output and its input. The reference to “feedback”, simply means that some portion of the output is returned “back” to the input to form part of the systems excitation.

Closed-Loop Torque Control. Such types of loop are used in battery powered vehicles, rails, and electric trains. The reference torque T^* is set through the accelerator, and this T^* follows by the loop controller and the motor. The speed of the drive is controlled by putting pressure on the accelerator. Closed Loop Speed Control of Induction Motor Drives: A Closed Loop Speed Control of Induction Motor Drives is shown in Fig. 6.43. It employs inner slip-speed loop with a slip limiter and outer speed loop. Since for a given current, slip speed has a fixed value, the slip speed loop also functions as an inner current loop.

This project aims to develop a low-cost design which can be used for closed-loop control of two micro-gearmotors. The current to the motors will also be monitored for current limiting and possible impedance control applications. It can be interfaced with over CAN bus, ensuring robustness and scalability in robotics applications.

Closed Loop Microstepping is a true closed loop mode of operation, and is the optimum use of a stepper motor still being driven as a stepper. Closed loop operation brings with it the risk of instability if the loop is not correctly tuned, so care must be taken to achieve stability.

3. Closed loop stepper motor. The encoder is used as a feedback source in a position loop which adjusts the torque requirements in real time. The encoder is also being used in a current loop to determine the proper electrical angle to apply to the motor. Common names for this architecture include “closed loop stepper” control or “servo stepper”.

Closed loop control is a feedback based mechanism of motor control, where any act on the environment creates some sort of change that affects future performance through feedback. Closed loop motor control is best suited to continuously controlled actions, but does not work quickly enough for ballistic actions.

Motor control - Wikipedia

Contrary to open-loop systems, closed-loop motor control is designed to automatically achieve the target output condition and maintain it by feeding back the actual state of the motor, such as velocity or position.

A valuable reference source for professionals and academics in this field, this is an encyclopedia-dictionary of the many scientific and technical terms now encountered in kinesiology and exercise science.

Motor Control: Issues and Trends discusses concepts, ideas and experimental data on issues and trends in motor control. The book contains the works of scientists who are doing research in the field of motor control. The contributed articles focus on such topics as central and peripheral mechanisms in motor control; theoretical approaches to the learning of motor skills; how the concept of attention can be used and applied to problems in the perception and production of movement; and motor task complexity. Psychologists, behaviorists, and neurophysiologists will find the book invaluable.

This book takes a new and up-to-date look at the prominent theory that the left hemisphere is specialised for representing patterns extended in time whereas the right hemisphere represents simultaneous or 'spatial' patterns. What makes it unique in the field is that it looks at this theory from a neurobiological basis. It suggests that the difference resides in the range of conduction times in the axons connecting different regions of the cortex in each hemisphere. This hypothesis is discussed with respect to theoretical models of brain dynamics, and both gross and microscopic structure of the hemispheres. It deals with the psychological implications of the hypothesis for higher functions of the human cerebrum and outlines testable implications wherever possible.
