Track geometry is three-dimensional geometry of track layouts and associated measurements used in design, construction and maintenance of railroad tracks. The subject is used in the context of standards, speed limits and other regulations in the areas of track gauge, alignment, elevation, curvature and track surface. Although, the geometry of the tracks is three-dimensional by nature, the standards are usually expressed in two separate layouts for horizontal and vertical.

Analysis showed that the if a track geometry defect is presents, the cumulative MGT "life" of the rail was approximately 30% less than that of a rail defect with no track geometry defect. Probability analysis showed that the presence of a geometry defect has astrong and well defined effect on the development of a rail defect.
