Eurocode provides design formulae for steel portal frames.

It advises that to determine approximate bending stresses in a steel portal frame, the

following formulae can be used:  $M_E = wL^2(3+5m)/16N$  and  $M_A = wL^2/8 + mM_E$

# Get Free Design Of Portal Frame

ME is the bending moment in the eave joints of the steel portal frame

## Steel portal frame

A portal frame building comprises a series of transverse frames braced longitudinally. The primary steelwork consists of columns

# Get Free Design Of Portal Frame

and rafters, which form portal frames, and bracing. The end frame (gable frame) can be either a portal frame or a braced arrangement of columns and rafters.
