In this investigation you will build new strands of DNA and RNA using nitrogen bases, sugars and phosphates to create the nucleotide sequence.

Remember, during replication when you are copying DNA, you

Read PDF Dna And Rna Lab 24

must build two new strands of DNA, but during transcription only a single strand of RNA is built.

They are both linear polymers, consisting of sugars, phosphates and bases, but there are some key differences which separate the two

DNA is responsible for storing and transferring genetic information, while RNA directly codes for amino acids and acts as a messenger between DNA and ribosomes to make proteins. DNA and RNA base pairing is slightly different since DNA uses the bases adenine, thymine,
