Software Engineering: A Methodical Approach (Second Edition) provides a comprehensive, but concise introduction to software engineering. It adopts a methodical approach to solving software engineering problems, proven over several years of teaching, with outstanding results. The book covers concepts, principles, design, construction, implementation, and management issues of software engineering. Each chapter is organized systematically into brief, reader-friendly sections, with itemization of the important points to be remembered. Diagrams and illustrations also sum up the salient points to enhance learning. Additionally, the book includes the author's original methodologies that add clarity and creativity to the software engineering experience. New in the Second Edition are chapters on software engineering projects, management support systems, software engineering frameworks and patterns as a significant building block for the design and construction of contemporary software systems, and emerging software engineering frontiers. The text starts with an introduction of software engineering and the role of the software engineer. The following chapters examine in-depth software analysis, design, development, implementation, and management. Covering object-oriented methodologies and the principles of object-oriented information engineering, the book reinforces an object-oriented approach to the early phases of the software development life cycle. It covers various diagramming techniques and emphasizes object classification and object behavior. The text features comprehensive treatments of: Project management aids that are commonly used in software engineering An overview of the software design phase, including a discussion of the software design process, design strategies, architectural design, interface design, database design, and design and development standards User interface design Operations design Design considerations including system catalog, product documentation, user message management, design for real-time software, design for reuse, system security, and the agile effect Human resource management from a software engineering perspective Software economics Software implementation issues that range from operating environments to the marketing of software Software maintenance, legacy systems, and re-engineering This textbook can be used as a one-semester or two-semester course in software engineering, augmented with an appropriate CASE or RAD tool. It emphasizes a practical, methodical approach to software engineering, avoiding an overkill of theoretical calculations where possible. The primary objective is to help students gain a solid grasp of the activities in the software development life cycle to be confident about taking on new software engineering projects.

Agricultural production needs to grow by 60 percent between 2005 and 2050 to feed the world's growing population, which is expected to reach 9.3 billion by 2050. 6 billion out of 9.3 will live in urban areas, roughly meaning some part of 3 billion rural habitants (who are farmers) will feed 9.3 billion people, with limited land and water and against challenges of changing climate. Every year, USD 83 billion (in 2009 USD) should be invested in the developing world to double their agricultural production. UNDP, considering the demand from regional governments and international community, initiated a project for a tripartite regional consortium in Afghanistan, Kyrgyzstan and Tajikistan in agro-food industry. The first phase is concluded in October 2015 when the Memorandum of Understanding establishing the Afghanistan, Kyrgyzstan and Tajikistan (AKT) Agro-food Industry Consortium signed by the governments; and the AKT Agro-food Industry Consortium launched at Dushanbe in October 2015. As part of the Feasibility & Build Up Phase, a comprehensive feasibility study started immediately after the launch. This analytical and diagnostic work provides the most detailed assessment of agro-food value chains in in Afghanistan, Kyrgyzstan and Tajikistan to date, and identifies a set of concrete investment areas at the micro, meso and macro levels.
