Have you ever wondered why New Zealand's plants and animals are so different from those in other countries? Why kakapo is the only parrot in the world that cannot fly, or why the kiwi lives here and nowhere else? New Zealand is an extraordinary place, unique on earth, and the remarkable story of how and why life evolved here is the subject of Ghosts of Gondwana. The challenge of explaining New Zealand's natural origins is picked up in this fully revised edition of the popular award-winning book. It presents the latest scientific research in highly readable form, highlighting studies that reveal the deep historical background of our landscapes, fauna and flora - from ancient frogs and moa to delicate insects and the magnificent southern beech forests. It introduces the latest discoveries and resolves past issues like the 'Oligocene drowning' hypothesis. Exciting fossil discoveries are revealed and new scientific technologies and approaches to the discipline of historical biogeography are discussed - approaches that range from undersea geology to molecular clocks - and it inevitably draws attention to the debates and conflicts that distinguish different schools of opinion in this holistic branch of theoretical science. This revision incorporates the results of 10 years of intensive scientific research and includes four entirely new chapters to: focus on 'yesterday's maps' to draw attention to the ephemeral islands in our history that have possibly acted as stepping stones for terrestrial animals and plants but today have sunk into the sea; incorporate the author's own special interest in an ancient group of 'jaw-moths', unknown and unnoticed by most people but with a strong message that New Zealand is part of the world when it comes to explaining where our fauna have come from; present recent research findings on our huge flightless birds, the ratites; and include New Zealand's terrestrial molluscs into the story. Ghosts of Gondwana identifies New Zealand as one of the most challenging places on earth to explain, but it's readable, engaging style and revised illustrations render this often-controversial discipline of science into a format that is accessible to any reader with an interest in natural history and the unique environment of New Zealand.

This book describes the essential components of the SCION secure Internet architecture, the first architecture designed foremost for strong security and high availability. Among its core features, SCION also provides route control, explicit trust information, multipath communication, scalable quality-of-service guarantees, and efficient forwarding. The book includes functional specifications of the network elements, communication protocols among these elements, data structures, and configuration files. In particular, the book offers a specification of a working prototype. The authors provide a comprehensive description of the main design features for achieving a secure Internet architecture. They facilitate the reader throughout, structuring the book so that the technical detail gradually increases, and supporting the text with a glossary, an index, a list of abbreviations, answers to frequently asked questions, and special highlighting for examples and for sections that explain important research, engineering, and deployment features. The book is suitable for researchers, practitioners, and graduate students who are interested in network security.

"This volume summarizes new developments in understanding the longest-lived icehouse period in Phanerozoic Earth history, the late Paleozoic ice age. Resolving the Late Paleozoic Ice Age in Time and Space provides summaries of existing and new data from the various Gondwanan continental relics, and also reviews stratigraphic successions from the paleotropical and temperate regions of Laurussia that preserve an indirect record of glaciation. It addresses the extent to which records of glaciation indicate protracted, long-term climatic austerity, as opposed to fluctuating, more dynamic climate, and provides new constraints on the timing of glaciation. Additionally, it tackles questions of synchronicity of glaciation across the various Gondwanan continental relics, and timing relationships between near-field and far-field records at greater levels of resolution than has been possible previously. Results point toward a dynamic icehouse regime that is comparable to the Cenozoic icehouse, and away from traditional interpretations of the late Paleozoic ice age as a single, protracted event that involved stable, long-lived ice centers."--Publisher's website.

"Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters, Steven Koonin draws upon his decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvy consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths: despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. Unsettled is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future.

Comparison is an indispensable intellectual operation that plays a crucial role in the formation of knowledge. Yet comparison often leads us to forego attention to nuance, detail, and context, perhaps leaving us bereft of an ethical obligation to take things correspondingly as they are. Examining the practice of comparison across the study of history, language, religion, and culture, distinguished scholar of religion Bruce Lincoln argues in Apples and Oranges for a comparatism of a more modest sort. Lincoln presents critiques of recent attempts at grand comparison, and enlists numerous theoretical examples of how a more modest, cautious, and discriminating form of comparison might work and what it can accomplish. He does this through studies of shamans, werewolves, human sacrifices, apocalyptic prophecies, sacred kings, and surveys of materials as diverse and wide-ranging as Beowulf, Herodotus 's account of the Scythians, the Native American Ghost Dance, and the Spanish Civil War. Ultimately, Lincoln argues that concentrating one's focus on a relatively small number of items that the researcher can compare closely, offering equal attention to relations of similarity and difference, not only grants dignity to all parties considered, it yields more reliable and more interesting—if less grandiose—results. Giving equal attention to the social, historical, and political contexts and subtexts of religious and literary texts also allows scholars not just to assess their content, but also to understand the forces, problems, and circumstances that motivated and shaped them.

"This book by Lisa Tauxe and others is a marvelous tool for education and research in Paleomagnetism. Many students in the U.S. and around the world will welcome this publication, which was previously only available via the Internet. Professor Tauxe has performed a service for teaching and research that is utterly unique."—Neil D. Opdyke, University of Florida
