large intestine, as shown in Figure 15.13. The primary

role of the rectum is to store the feces until defecation.

The feces are propelled using peristaltic movements during elimination. The anus is an opening at the far-end of the digestive tract and

File Type PDF

Hodders

is the exit point for the waste material. Two sphincters between the rectum and anus control elimination: the inner sphincter is involuntary and the outer sphincter is voluntary.
