The total m_s is then $5 \times (+1/2) + (1/2) = 2$. (c) The five electrons with $m_s = +1/2$ use up all of the possible m_l values $(+2, +1, 0, -1, -2)$, which sum to zero. The sixth electron has a maximum m_l of $+2$, so the maximum total m_l is $+2$. (d) The next available level for one of the 3d electrons is 4p. The remaining five 3d.
