This book addresses the central problem of music cognition: how listeners' responses move beyond mere registration of auditory events to include the organization, interpretation, and remembrance of these events in terms of their function in a musical context of pitch and rhythm. Equally important, the work offers an analysis of the relationship between the psychological organization of music and its internal structure. Combining over a decade of original research on music cognition with an overview of the available literature, the work will be of interest to cognitive and physiological psychologists, psychobiologists, musicians, music researchers, and music educators. The author provides the necessary background in experimental methodology and music theory so that no specialized knowledge is required for following her major arguments.

Although we have been successful in our careers, they have not turned out quite as we expected. We both have changed positions several times-for all the right reasons-but there are no pension plans vesting on our behalf. Our retirement funds are growing only through our individual contributions. Michael and I have a wonderful marriage with three great children. As I write this, two are in college and one is just beginning high school. We have spent a fortune making sure our children have received the best education available. One day in 1996, one of my children came home disillusioned with school. He was bored and tired of studying. "Why should I put time into studying subjects I will never use in real life?" he protested. Without thinking, I responded, "Because if you don't get good grades, you won't get into college." "Regardless of whether I go to college," he replied, "I'm going to be rich."

#1 New York Times Bestseller Legendary venture capitalist John Doerr reveals how the goal-setting system of Objectives and Key Results (OKRs) has helped tech giants from Intel to Google achieve explosive growth—and how it can help any organization thrive. In the fall of 1999, John Doerr met with the founders of a start-up whom he'd just given \$12.5 million, the biggest investment of his career. Larry Page and Sergey Brin had amazing technology, entrepreneurial energy, and sky-high ambitions, but no real business plan. For Google to change the world (or even to survive), Page and Brin had to learn how to make tough choices on priorities while keeping their team on track. They'd have to know when to pull the plug on losing propositions, to fail fast. And they needed timely, relevant data to track their progress—to measure what mattered. Doerr taught them about a proven approach to operating excellence: Objectives and Key Results. He had first discovered OKRs in the 1970s as an engineer at Intel, where the legendary Andy Grove ("the greatest manager of his or any era") drove the best-run company Doerr had ever seen. Later, as a venture capitalist, Doerr shared Grove's brainchild with more than fifty companies. Wherever the process was faithfully practiced, it worked. In this goal-setting system, objectives define what we seek to achieve; key results are how those top-priority goals will be attained with specific, measurable actions within a set time frame. Everyone's goals, from entry level to CEO, are transparent to the entire organization. The benefits are profound. OKRs surface an organization's most important work. They focus effort and foster coordination. They keep employees on track. They link objectives across silos to unify and strengthen the entire company. Along the way, OKRs enhance workplace satisfaction and boost retention. In Measure What Matters, Doerr shares a broad range of first-person, behind-the-scenes case studies, with narrators including Bono and Bill Gates, to demonstrate the focus, agility, and explosive growth that OKRs have spurred at so many great organizations. This book will help a new generation of leaders capture the same magic.

Historian Ramses Delafontaine presents an engaging examination of a controversial legal practice: the historian as an expert judicial witness. This book focuses on tobacco litigation in the U.S. wherein 50 historians have witnessed in 314 court cases from 1986 to 2014. The author examines the use of historical arguments in court and investigates how a legal context influences historical narratives and discourse in forensic history. Delafontaine asserts that the courtroom is a performative and fact-making theatre. Nonetheless, he argues that the civic responsibility of the historian should not end at the threshold of the courtroom where history and truth hang in the balance. The book is divided into three parts featuring an impressive range of European and American case studies. The first part provides a theoretical framework on the issues which arise when history and law interact. The second part gives a comparative overview of European and American examples of forensic history. This part also reviews U.S. legal rules and case law on expert evidence, as well as extralegal challenges historians face as experts. The third part covers a series of tobacco-related trials. With remunerations as high as hundreds of thousands of dollars and no peer-reviewed publications or communication on the part of the historians hired by the tobacco companies the question arises whether some historians are willing to trade their reputation and that of their university for the benefit of an interested party. The book further provides 50 expert profiles of the historians active in tobacco litigation, lists detailing the manner of the expert's involvement, and West Law references to these cases. This book offers profound and thought-provoking insights on the post-war forensicification of history from an interdisciplinary perspective. In this way, Delafontaine makes a stirring call for debate on the contemporary engagement of historians as expert judicial witnesses in U.S. tobacco litigation.
