This book explores how lighting systems based on LED sources have the ability to positively influence the human circadian system, with benefits for health and well-being. The opening chapters examine the functioning of the human circadian system, its response to artificial lighting, potential health impacts of different types of light exposure, and current researches in circadian photometry. A first case study analyzes the natural lighting available in an urban interior, concluding that it is unable to activate the human circadian system over the entire year. Important original research is then described in which systems suitable for artificial circadian lighting in residential interiors and offices were developed after testing of new design paradigms based on LED sources. Readers will also find a detailed analysis of the LED products available or under development globally that may contribute to optimal artificial circadian lighting, as well as the environmental sensors, control interfaces, and monitoring systems suitable for integration with new LED lighting systems. Finally, guidelines for circadian lighting design are proposed, with identification of key requirements.

Comprehensive. Detailed. Practical. Set Lighting Technician's Handbook, Fourth Edition, is a friendly, hands-on manual covering the day-to-day practices, equipment, and tricks of the trade essential to anyone doing motion picture lighting, including the lamp operator, rigging crew, gaffer, best boy, or director of photography. This handbook offers a wealth of practical technical information, useful techniques, as well as aesthetic discussions. The Set Lighting Technician's Handbook focuses on what is important when working on-set: trouble-shooting, teamwork, set protocol, and safety. It describes tricks and techniques for operating a vast array of lighting equipment including LEDs, xenons, camera synchronous strobes, black lights, underwater units, lighting effects units, and many others. Since its first edition, this handy on-set reference continues to be widely adopted as a training and reference manual by union training programs as well as top university film production programs. New to the fourth edition: \* More coverage of the aesthetics of lighting \* Detailed information on LED technology and gear \* Material is harmonized with industry safety and skills training curriculum \* More

coverage than ever before about setting up and running DMX512 networks and DMX512 enabled devices, including wireless DMX512 networks \* Completely revised and updated sections of HMIs, tungsten light fixtures, and fluorescent technologies \* Additional information on dealing with current harmonics, working with portable generators. \* New section on using 480V power \* In addition to previsualization software, new material provides a primer on creating professional light plots and using computer aided design software \* New additions to the arsenal of electrical distribution equipment that make our sets safer and easier to power \* More rigging tricks and techniques \* Written in the same friendly, easy-to-read style that has made this book so popular \* Companion Web site contains exclusive articles written by the author, illustrations, and an indispensable resource center with key industry links. Please visit <http://www.booksite.focalpress.com/box/setlighting/> \* An indispensable on-the-job reference for tens of thousands of film lighting technicians \* Includes professional-level procedures that save time and promote safety and efficiency \* Written by a lighting technology expert with 20 years of experience as a gaffer and director of photography.

Why do the Dutch continue to play a central role in the global production, sales, and distribution of flowers? What are the origin and history of the bulb and flower industry in the Netherlands? How are Artificial Intelligence (AI), complex algorithms, and modern distribution systems ensuring that fresh flowers reach their destination on time? This very entertaining and informative book introduces readers to the global flower business, and highlights the surprising factors that helped the Dutch become global leaders on the flower markets. The book reveals the complexity of the flower markets in terms of their ability to produce, transport, and deliver fresh flowers on a global scale. In addition, it explores how information advantage is created by blending business with technology, from robotized glasshouses to the use of AI-driven algorithms for flower production and distribution. In closing, the book presents lessons learned regarding the circular and digital transformation of the high-speed flower business and markets in order to deliver sustainable value for customers. Combining the light beauty of flowers with the harsh language of the digital universe is a masterfully executed task in this book, organized as a bouquet of algorithms, data science, and digital platforms. Mandatory reading for all those interested in the flower business as well as for those who want to know more about the perfume emanating from digital systems. Eduardo Diniz Professor and Head of the Technology and Data Science Department, Escola de Administração de Empresas de São Paulo, Fundação Getulio Vargas, São Paulo, Brazil This unique book leads you through the bulb fields and auctions of the Netherlands, through history, logistics, auction design, and Internet technology, to draw lessons in business management from the study of flowers. With beautiful illustrations. A tour de force. John Kay Economist, Author of Radical Uncertainty and

Greed is Dead, and Fellow, St. John's College, University of Oxford, Oxford, United Kingdom If you want to understand the impact of information and technology on a fascinating industry, this book is a must-read. The author explains in a highly intriguing way how innovations propelled the flower industry from the sixteenth century till today. Whether you are working in the flower industry, a business student, academic, or just intrigued by the business behind flowers, you will enjoy this book! Martin Mocker Professor of Information Systems, ESB Business School, Reutlingen University, Reutlingen, Germany. Research Affiliate, MIT Sloan Center for Information Systems Research, Cambridge, USA

With Profiting from Clean Energy, respected investment analyst Richard Asplund provides an in-depth explanation of the technology and industry structure behind various sectors of this field and in the process identifies more than 150 stocks related to clean energy. Along the way, Asplund discusses exactly what it takes to effectively invest in clean energy—whether it be through buying individual stocks, investing in green exchange-traded funds or mutual funds, or trading the biofuel and carbon credit markets.

This book is for anyone who wants to learn Intel Galileo for home automation and cross-platform software development. No knowledge of programming with Intel Galileo is assumed, but knowledge of the C programming language is essential.

The Fundamentals and Applications of Light-Emitting Diodes: The Revolution in the Lighting Industry examines the evolution of LEDs, including a review of the luminescence process and background on solid state lighting. The book emphasizes phosphor-converted LEDs that are based on inorganic phosphors but explores different types of LEDs based on inorganic, organic, quantum dots, perovskite-structured materials, and biomaterials. A detailed description is included about the diverse applications of LEDs in fields such as lighting, displays, horticulture, biomedicine, and digital communication, as well as challenges that must be solved before using LEDs in commercial applications. Traditional light sources are fast being replaced by light-emitting diodes (LEDs). The fourth generation of lighting is completely dominated by LED luminaires. Apart from lighting, LEDs have extended their hold on other fields, such as digital communications, horticulture, medicine, space research, art and culture, display devices, and entertainment. The technological promises offered by LEDs have elevated them as front-runners in the lighting industry. Presents a concise overview of different types of light-emitting diodes (LEDs) based on inorganic phosphors, organic materials, quantum dots, perovskite-structured materials, and biomaterials Includes a discussion of current and emerging applications in lighting, communications, horticulture, and medical fields Addresses

fundamentals, luminescence mechanisms, and key optical materials, including synthesis methods

Living Innovation: Competing in the 21st Century Access Economy explores how the digital revolution has empowered customers, and how organizations have to innovate to gain a deeper understanding of user needs. Stepping away from the traditional mindset of products being the foremost concern of an organization, this book elaborates on how service value and the management of customer relationships are some of the new goals of an experience-driven economy. The ten chapters of this book provide insights and different perspectives into this new economy, including the consequences of the shift away from a product-based mindset, the role of the physical space as a stimulator of innovation and the keys to making service innovation a success.

Intellectual Property (IP) is one of the most vital assets for any business organization. It is a domain not restricted to lawyers alone; it is a crucial area of concern for business organizations, managers, and corporate leaders. Intellectual Property and Business demonstrates how companies can deploy their IP not just as legal instruments but also as dominant and powerful financial assets, and as useful arsenal that can boost their business. The book aims to provide a basic understanding of various forms of IP that business organizations need to protect, and to analyze and understand IP management and strategy through case studies. It highlights these aspects of IP management through the lens of both a lawyer and a business manager.

Gain a solid understanding of Light-Emitting Diode (LED) Systems Theory with this unique book. Written by a leading expert in LED lighting, it links together the photometric, electrical, thermal and chromatic elements of LED systems into a single, unified framework, and explores their complex interactions with one another.

- Get to grips with chromatic, photometric and thermal modelling of LED systems
- Discover new techniques for precise dimming and colour control
- Learn methods for determining system parameters and internal variables
- Gain insight into advanced applications for LED system design and optimization

Providing straightforward and intuitive explanations, this is an ideal guide for professional engineers, graduate students and researchers working on solid-state lighting systems and smart lighting, and those taking advanced courses on LED devices and systems.
