A time-travelling paradox TV series, Dark is so convoluted with its timelines and narrative, that it makes Chris Nolan's Memento look as complicated as a one-box crossword puzzle. I am not ...

This text covers a workshop which was devoted to recent experimental and theoretical advances in quantum mechanics, including: interference effects, the quantum eraser, non-disturbing and Schroedinger-cat-like states experiments, EPR correlations, teleportation, superimimal effects, quantum information and computing alternative theories.

Economics is full of puzzles and paradoxes that often frustrate and challenge everyone, including economists. This engaging book includes fifty puzzles and focuses on three types of paradox. First, everyday observations that appear to belie common sense (such as why some supermarket items sell for more per ounce in larger sizes). Secondly, those paradoxes which have perplexed economists in the past but have since been fairly resolved (such as the diamond-water paradox). Finally, empirical or conceptual anomalies that remain unresolved and present a challenge to today's economists (such as the voting paradox).

This sharply intelligent, consistently provocative book takes the reader on an astonishing, thought-provoking voyage into the realm of delightful uncertainty\u2014a world of paradox in which logical argument leads to contradiction and common sense is seemingly rendered irrelevant.

The XII Max Born Symposium has a special character. It was held in honour th of Jan Lopusza nski on the occasion of his 75 birthday. As a rule the Max Born Symposia organized by the Institute of Theoretical Physics at the University of Wroc law were devoted to well-de ned subjects of contemporary interest. This time, however, the organizers decided to make an exception. Lopusza nski's in\u2019uence on and contribution to the development of th- retical physics at Wrocla w University is highly appreciable. His personality and scienti c achievements gave him authority which he used to the best - vantage of the Institute. In fact we still pro t from his knowledge, experience and judgment. Lopusza nski's scienti c activity extended over about half a century. He successfully participated in research on the most important and fascinating issues of theoretical physics. Duning his scienti c career he met and made friends with many outstanding physicists who shaped theoretical physics to the present form. For this reason, as well as the coincidence of the approaching end of the century, we thought that it would be interesting and instructive to give the symposium a retrospective character. We decided to trust the speakers' judgment and intuition for the choice of subjects for their talks. We just asked them to give the audience the important message based on their knowledge and experience.

A collection of 12 essays on historical mysteries. Contents: The Case Of Elizabeth Canning The Murder Of Escovedo The Campden Mystery The Case Of Allan Breck The Cardinal's Necklace The Mystery Of Kaspar Hauser The Gowrie Conspiracy ... and more ...
