Open Internet is perhaps the most important issue facing the Federal Communications Commission. The issue is contentious, with academics and influential economic interests on both sides. This volume offers updated papers originally presented at a June 2003 conference held by the Progress and Freedom Foundation. The authors are top researchers in telecommunications.

After a decade of discussion on how to guarantee an open, sustainable internet and often intense debate regarding the Federal Communications Commission's 2009 public hearing on the application of the principles of net neutrality, on 21st December 2010 the various elements that comprise the solution to this now famous controversy were passed. Open Internet solution has not satisfied many people, and nearly everyone agrees that it will not end the debate and nor will it resolve the underlying structural problems. This book examines the source, development and viewpoints on this issue based on contributions from leading experts from the academic and business worlds in the USA and Europe who have been involved in the debate. This is a highly important book for understanding the various points of view on the very current and controversial issue of web neutrality.

Open Internet in a discriminatory fashion in order to maximise end users' freedom and safeguard an open Internet. This book is the result of a collective work aimed at providing deeper insight into what is network neutrality, how does it relate to human rights and free competition and how to properly frame this key issue through sustainable policies and regulations. The Net Neutrality Compendium stems from three years of discussions nurtured by the members of the Dynamic Coalition on Network Neutrality (DCNN), an open and multi-stakeholder group, established under the aegis of the United Nations Internet Governance Forum (IGF).

Is the Internet erasing national borders? Will the future of the Net be set by Internet engineers, rogue programmers, the United Nations, or powerful countries? Who's really in control of what's happening on the Net? In this provocative new book, Jack Goldsmith and Tim Wu tell the fascinating story of the Internet's challenge to governmental rule in the 1990s, and the ensuing battles with governments around the world. It's a book about the fate of one idea--that the Internet might liberate us forever from government, borders, and even our physical selves. We learn of Google's struggles with the French government and Yahoo's capitulation to the Chinese

regime; of how the European Union sets privacy standards on the Net for the entire world; and of eBay's struggles with fraud and how it slowly learned to trust the FBI. In a decade of events the original vision is uprooted, as governments time and time again assert their power to direct the future of the Internet. The destiny of the Internet over the next decades, argue Goldsmith and Wu, will reflect the interests of powerful nations and the conflicts within and between them. While acknowledging the many attractions of the earliest visions of the Internet, the authors describe the new order, and speaking to both its surprising virtues and unavoidable vices. Far from destroying the Internet, the experience of the last decade has lead to a quiet rediscovery of some of the oldest functions and justifications for territorial government. While

territorial governments have unavoidable problems, it has proven hard to replace what legitimacy governments have, and harder yet to replace the system of rule of law that controls the unchecked evils of anarchy. While the Net will change some of the ways that territorial states govern, it will not diminish the oldest and most fundamental roles of government and challenges of governance. Well written and filled with fascinating examples, including colorful portraits of many key players in Internet history, this is a work that is bound to stir heated debate in the cyberspace community.
