valuable resource for the farmer; and the animal itself may become a source of food or other products at the end of its useful life.

Draft animal | Britannica

Draught animal power can be even more economic when one bullock is used instead of a pair or when a (cross-bred) cow is used instead of a male, since it reduces the cost of maintaining the larger herd necessary to satisfy both replacement and milk production requirements. It is expected that draught animal power will decline slightly by the year 2000 (FAO, 1987) as will dependency on human power (Figure 3), but the contribution of draught animals will remain much more important than that of ...

about a year on 30 horses doing brewery draught work, and in excellent health throughout the period. The rations fed consisted of oats, maize, molasses, hay, straw and carrots. Weights varied between 600 and 800 kg. No correlation was found between weight and feed requirement and this may be correlated with the fact that the heaviest horses covered the...

Feed requirements of draught horses. The food requirements is of two types : (A) Maintenance requirements which support the basic functions of life. (B) Milk-Producing requirements which increase the milk-yield. For dairy animals, feed constitutes two main components : (i) Roughage : It contain large amount of fibre which has low nutrient contents. It includes hay fibre silage, fodder and legumes like barseem, lucrene and cowpea.

Animal Production is the development of the rural world. The subject was discussed in specific sessions: animal; management systems and types of animal production; management systems; environment and landscape; animal contribution to leisure, fairs, handicraft and iconography; organization and evaluation of resources; study cases. Animal production is an essential factor for the development of the rural environment. Because of the involved activities it is important to diversify the rural landscape, to promote the rural tourism and to allow the settlement of population in rural areas.

critical to professionals in animal and food science, food production and processing, livestock management, and nutrition.

The inter-relationship between man, resources and development is the point of discussion and elaboration in the present volume. In the wake of integrated rural regional development, it is imperative to envisage development as socio-economic change for betterment of masses involving local resources and incorporate interest. Such a structural change in orientation of planning requires resource evaluation and allocation on microscale in detail. Utilizing the contemporary techniques, evaluation of potentials, present utilization and possibilities of optimum utilization of resources of a relatively less developed region, i.e., Sagar Division of Madhya Pradesh is attempted. This division provides an example of how only basic

attributes of resources are taken care of ignoring the combinational ones in the existing system of spatial organisation developed under top-down planning. The widening disparity can be minimized by planning on micro-level. A comparatively new approach of identification of planning units, incorporating characteristics of both formal and functional regions, has been attempted. As such the present volume can serve as model for resource-based development planning of depressed regions.

This book covers many of the recent research observations on the management and use of working animals in tropical agricultural systems. Studies of oxen, donkeys and camels in sub-Saharan Africa, cows and donkeys in Ethiopia, buffaloes in Vietnam, camels in Libya and horses and donkeys in Southern Italy are
