The significance of business-led corporate responsibility coalitions is indisputable. The WBCSD has 200 member companies with combined annual revenues of US\$7 „trillion „, the UN Global Compact has almost 8,000 corporate members, over two-thirds of them from developing countries. It is estimated that there are more than 110 national and international generalist business-led CR coalitions. But there is now urgent need for informed and balanced analysis of their achievements, their progress and their potential. Why did these coalitions start and grow? What have been their impacts? Where are they heading now? Where should they be going? What is the future? In a period of austerity, the business and public sector must decide whether funding these coalitions is a priority. To meet current crises, there will have to be a great deal more business involvement; but efforts of individual corporations will not be sufficient. There is also a need for far more collective action among companies and more collaborative action between different sectors of society. Business-led CR coalitions with their decades of convening experience could play an important role in this process - if they are fit for purpose going forward. Authors David Grayson and Jane Nelson have been actively involved in such coalitions for decades. In Corporate Responsibility Coalitions they first explore the past, present and future of these coalitions: the emergence of new models of collective corporate action over the past four decades; the current state of play, and the increasing number, diversity and complexity in terms of how they not only network with each other but also engage in a much broader universe of institutions that are promoting responsible business practices. In addition, the book provides in-depth profiles of the most strategic, effective and long-standing coalitions, including: Business for Social Responsibility; Business in the Community; CSR Europe; Instituto Ethos; International Business Leaders Forum; the UN Global Compact; and the WBCSD. This book will be required reading for key supporters and potential partners of such coalitions in companies, governments, international development agencies, foundations, non-governmental organizations, academic institutions and think-tanks. It also aims to inspire a future generation of leaders to be more aware of the role of business as a partner in driving more inclusive, green and responsible growth, and to help them develop new types of leadership skills so that they can be effective in finding multi-stakeholder solutions to complex and systemic challenges.

The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. Big Data Imperatives, focuses on resolving the key questions on everyone ' s mind: Which data matters? Do you have enough data volume to justify the usage? How you want to process this amount of data? How long do you really need to keep it active for your analysis, marketing, and BI applications? Big data is emerging from the realm of one-off projects to mainstream business adoption; however, the real value of big data is not in the overwhelming size of it, but more in its effective use. This book addresses the following big data characteristics: Very large, distributed aggregations of loosely structured data – often incomplete and inaccessible Petabytes/Exabytes of data Millions/billions of people providing/contributing to the context behind the data Flat schema's with few complex interrelationships Involves time-stamped events Made up of incomplete data Includes connections between data elements that must be probabilistically inferred Big Data Imperatives explains 'what big data can do'. It can batch process millions and billions of records both unstructured and structured much faster and cheaper. Big data analytics provide a platform to merge all analysis which enables data analysis to be more accurate, well-rounded, reliable and focused on a specific business capability. Big Data Imperatives describes the complementary nature of traditional data warehouses and big-data analytics platforms and how they feed each other. This book aims to bring the big data and analytics realms together with a greater focus on architectures that leverage the scale and power of big data and the ability to integrate and apply analytics principles to data which earlier was not accessible. This book can also be used as a handbook for practitioners; helping them on methodology, technical architecture, analytics techniques and best practices. At the same time, this book intends to hold the interest of those new to big data and analytics by giving them a deep insight into the realm of big data.
