Urban search and rescue is a type of technical rescue operation that involves the location, extrication, and initial medical stabilization of victims trapped in an urban area, namely structural collapse due to natural disasters, mines and collapsed trenches. The causes of USAR

incidents can be categorised as accidental and deliberate. Structural collapse incidents can comprise unstable or collapsed structures in an unsafe position. Usually collapse incidents leave voids inside the debris that ca

A field guide for UK urban search and rescue teams, covering every aspect of operations from assessment and management through shoring, lifting and moving, breaching and breaking, hot cutting, confined spaces and casualty assessment. Waterproof paper.

This Rescue Field Operations Guide has been prepared to guide Department of Homeland Security (DHS)/Federal Emergency Management Agency (FEMA) Rescue personnel during Federal disaster response operations. The National Urban Search and Rescue (US&R) Response System provides for the coordination, development, and maintenance of the Federal effort with resources to locate, extricate, and provide immediate medical treatment

to victims trapped in collapsed structures; and to conduct other life saving operations. This guide is designed to supplement the National US&R Response System Field Operations Guide, September 2003 (US&R-23-FG) which provides the US&R Response System methods of operation, organization, capabilities, and procedures in mobilization, on-site operations, and demobilization. This guide provides a detailed reference for performing Rescue Operations.

A pocket-sized reference guide for teams engaged in urban search and rescue operations. This booklet includes checklists and illustrations for rescuers when responding to structural collapse or natural disasters such as earthquakes and tsunamis. This booklet will assist classified teams in

preparation for training, classification, exercises and deployment. Content is contributed by recognised global leaders in search, rescue, logistics, management and medical elements.

In the event of large crises (earthquakes, typhoons, floods, ...), a primordial task of the fire and rescue services is the search for human survivors on the incident site. This is a complex and dangerous task, which too often - leads to loss of lives among the human crisis managers themselves. This book explains how unmanned search can be added to the toolkit of the search and rescue workers, offering a valuable tool to save human lives and to speed up the search and rescue process. The introduction of robotic tools in the world of search and rescue is not Page 15/29

straightforward, due to the fact that the search and rescue context is extremely technology-unfriendly, meaning that very robust solutions, which can be deployed extremely quickly, are required. Multiple research projects across the world are tackling this problem and in this book, a special focus is placed on showcasing the results of the European Union ICARUS project on this subject. The ICARUS project proposes to equip first responders with a comprehensive and integrated set of unmanned search and rescue tools, to increase the situational awareness of human crisis managers, so that more work can be done in a shorter amount of time. The ICARUS tools consist of assistive unmanned air, ground, and sea vehicles, equipped with victimdetection sensors. The unmanned

vehicles collaborate as a coordinated team, communicating via ad hoc cognitive radio networking. To ensure optimal human-robot collaboration, these tools are seamlessly integrated into the command and control equipment of the human crisis managers and a set of training and support tools is provided to them in order to learn to use the ICARUS system. The research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement number 285417. The publishing of this book was funded by the EC FP7 Post-Grant Open Access Pilot programme.

proceedings of the 19th International Conference on Human-Computer Interaction, HCII 2017, held in Vancouver, BC, Canada, in July 2017. The total of 1228 papers presented at the 15 colocated HCII 2017 conferences was carefully reviewed and selected from 4340 submissions. The papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. They cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The papers included in this volume cover the following topics: games in HCI; mobile and wearable interaction; HCI, children and learning; and HCI in complex human environments

Drone technologies have constantly been developing for over 100 years. The latest models exhibit a previously unseen set of specifications available to the end users. The collective effort of distinguished international researchers, within the field of drone technologies, has been incorporated into this textbook suitable to the broader audience. The book has been edited by Prof. George Dekoulis, Aerospace Engineering Institute (AEI), Cyprus, an expert on state-of-the-art implementations of reconfigurable space engineering systems. The book consists of four main sections, namely, "Introduction," "Drone History," "Drone Design," and "Drone Applications." We hope this book will be beneficial to professionals, researchers, and academicians and, moreover, to

inspire the younger generations into pursuing relevant academic studies and professional careers within the drone industry.

Lola was a buckshot-riddled stray, lost on a Memphis highway. Cody was rejected from seven different homes. Ace had been sprayed with mace and left for dead on a train track. They were deemed unadoptable. Untrainable. Unsalvageable. These would become the same dogs America relied on when its worst disasters hit In 1995. Wilma Melville volunteered as a canine search-and-rescue (SAR) handler with her Black Labrador Murphy in the aftermath of the Oklahoma City bombing. At the time, there were only fifteen FEMA certified SAR dogs in the United States. Believing in the value of these Page 20/29

remarkable animals to help save lives, Wilma knew many more were needed in the event of future major disasters. She made a vow to help 168 dogs receive search-and-rescue training in her lifetime—one for every Oklahoma City victim. Wilma singlehandedly established the National Disaster Search Dog Foundation (SDF) to meet this challenge. The first canine candidates—Ana, Dusty, and Harley—were a trio of golden retrievers with behavioral problems so severe the dogs were considered irredeemable and unadoptable. But with patience, discipline, and love applied during training, they proved to have the ability, agility, and stamina to graduate as SARs. Paired with a trio of firefighters, they were among the first responders searching the ruins of the World Trade Center following

9/11—setting the standard for the more than 168 of the SDF's search-and-rescue dogs that followed. Beautiful and heart-wrenching, Hero Dogs is the story of one woman's dream brought to fruition by dedicated volunteers and firefighters—and the bonds they forged with the incredible rescued-turned-rescuer dogs to create one of America's most vital resources in disaster response.

Editor-in-Chief, Dr. Gregory Ciottone, and Associate Editors, Dr. Philip D. Anderson, Dr. Erik Auf Der Heide, Dr. Robert G. Darling, Dr. Irving Jacoby, Dr. Eric Noji, and Dr. Selim Suner, recognized worldwide as authorities in the field, bring you this brand-new reference, which offers comprehensive yet succinct guidance on the preparation, assessment, and

management of a full range of s disasters, both natural and man-made (including terrorist attacks and the threat of biological warfare). More than 200 contributors carefully outline the basics of disaster management and provide guidance on more than 100 specific disaster situations. Part 1 offers an A to Z source for information on every aspect of disaster medicine and management. Part 2 features an exhaustive compilation of every conceivable disaster event, organized to facilitate fast reference in a real-time setting. The second part of the book also serves as a quick consult on disaster medicine. Presents a full range of coverage from the basics of disaster medicine to more advanced concepts, such as tactical EMS, hazard vulnerability analysis, impact of disaster on children, and more.

Discusses identification of risks. planning of organization and equipment, and education and training. Includes individual Concepts and Events sections that provide information on the general approach to disaster medicine and practical information on specific disasters. Offers comprehensive coverage of natural disasters, accidental disasters, transportation disasters, and intentional events. Includes an exhaustive list of chapters on the conceivable chemical and biologic weapons known today. Features a practical chapter organization throughout that covers description of event, pre-incident considerations, post-incident considerations, medical treatment of casualties, unique considerations, pitfalls, case presentations, and suggested reading. Page 24/29

Discusses the management of future events, or possible scenarios, for which there is no precedent.

This project looks to improve first responder situational awareness using mobile computing techniques. The prototype system combines wireless communication, real-time location determination, digital imaging, and three-dimensional graphics. Responder locations are tracked in an outdoor environment via GPS and uploaded to a central server via GPRS or an 802.11 network. Responders can also wirelessly share digital images and text reports, both with other responders and with the incident commander. A pre-built three dimensional graphics model of the emergency scene is used to visualize responder and report locations.

Page 25/29

Responders have a choice of information end points, ranging from programmable cellular phones to tablet computers. The system also employs location-aware computing to make responders aware of particular hazards as they approach them. The prototype was developed in conjunction with the NASA Ames Disaster Assistance and Rescue Team and has undergone field testing during responder exercises at NASA Ames.

About the Book The Downwind Walk lets you experience the tragic events following the terrorist attacks on the World Trade Center in New York on September 11, 2001 through the eyes of an Urban Search and Rescue (USAR) paramedic who went into harm's way to rescue the victims, which rapidly included many of his

"brothers" and "sisters" of the New York Fire Department (NYFD) and Emergency Medical Services (EMS). The author was a member of the EMS FDNY in the Bronx who was deployed with the Federal Emergency Management Association (FEMA) USAR team at Ground Zero. He went downwind with the USAR team after they set up operations and donned the proper protective clothing and breathing protection. Their mission was to take a first hand look at that mass casualty incident (MCI), assess the damage and losses, and make an estimation of resources needed to mitigate the incident. The reader is invited to take the downwind walk with Steve as he recounts the events, sights, smells and vivid memories of that unforgettable September from eye level at Ground Zero, in his dusty Page 27/29

boots. In this book, you will read stories about EMTs and paramedics who were at Ground Zero with the author, including some who were wounded or traumatized and others who made the "ultimate sacrifice." You will also learn about NYFD FMS personnel who made a significant contribution to patient care and public service by responding to numerous 9-1-1 calls or assisting fallen coworkers that week despite extremely stressful working conditions. No doubt you have heard the popular stories that tell of heroism on airline flights, in the Twin Towers and at the Pentagon. It is also important for future generations of Americans to know about the sacrifice and dedication of NYFD EMS first responders. Now is the time to share their stories as the 10th Anniversary of 9/11 looms on the Page 28/29

horizon as ominously as the smoke and dust filled the atmosphere after the collapse of the Twin Towers. Steve wants future EMTs and paramedics to know about the individual acts of caring and dedication of the EMS first responders at Ground Zero. He also would like to share with them stories of how EMS dealt with this horrendous incident and lessons learned from the catastrophic consequences of that MCI so they may learn from their experience.
