This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the

evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

A project manager must not only master methods and processes, but also have the ability to deal with new, unexpected and critical situations. The book deals with these challenges, the passion for projects and the creativity which is required in order to lead projects and bring them to a successful conclusion. Experienced project managers report on exciting tasks in various countries, daily life as project managers and about their personal experiences and learning effects. Readers will experience the fascinating appeal of the job of a "project manager", which also means constantly being prepared to get into a new task. Furthermore, the book provides ideas about how to overcome social, cultural, organisational, financial, bureaucratic or other hurdles. Not only classic project managers - engineers and economists -, but also lawyers or industrial engineers, who work in projects or are interested in project work, will be inspired by this book, how personal commitment and professional, organisational and social capabilities combine to form this unique profession.

The authors address claims that vertical ownership ties reduce programming diversity, restrict entry of

"This report explores the changing face of project finance in developing markets. IFC, and more recently, other multilateral, bilateral, and export credit institutions have played a strong supportive role in bringing project finance to its current volumes. This role was highlighted in 1998, when these institutions sustained flows of an estimated \$25 billion at a time when there was an abrupt decline in some types of private flows. IFC, in particular, was a pioneer of project finance in developing countries and has a unique depth of experience in this field, which spans more than 40 years in the practical implementation of some 2000 projects, many of them on a limited-recourse basis. Particularly in today's marketplace, IFC's ability to mobilize finance (both loan and equity for its own account and syndicated loans under its B-loan program), the strength of its project appraisal capabilities, and its experience in structuring complex transactions in difficult environments have been reassuring to other participants and important to the successful financing of many projects. This report draws on IFC's experience in more than 230 greenfield projects costing upward of \$30 billion that relied on project finance on a limited-recourse basis (see Appendix A). It opens with a brief description of the major international trends in project finance over the past two decades and then turns to the essential ingredients of successful project financing."--Publisher abstract.
